Welcome to MarketDirect StoreFront 10.2 Update 2

MarketDirect StoreFront (formerly known as Digital StoreFront) is EFI's award winning web-to-print platform. MarketDirect StoreFront offers the industry's leading print buyer experience and onramp to a digital workflow, plus a best-of-class toolset for configuring and managing this printing e-commerce platform. MarketDirect StoreFront 10.2 Update 2 introduces enhancements and addresses issues found in previous releases.

As we continue to evolve the product, the most important input comes from our existing customer base. We value your feedback. Submit feature requests to market.direct@efi.com. Submit documentation requests to mdsfdocumentation@efi.com.

Note As part of our commitment to continuously improve the quality of MarketDirect StoreFront and address issues in a timely manner, we will be releasing updates when possible. Self-hosted customers, please be sure to visit <https://www.efi.com/marketing/productivity-software/promos/upgrade-order-form/> periodically and click **Upgrade to the latest version** (on the right-hand side under **Learn More**) to download and upgrade to the latest version of MarketDirect StoreFront to ensure that you are running the latest version of the software. Cloud-based (EFI-hosted) customers will be updated automatically.

Cloud (EFI-Hosted) Installations

- Cloud customers will be contacted with the date their sites will be upgraded.

Customer-Hosted Installations: How to Obtain & Apply the Software

Note on Release Types: Upgrade and Update

- Major releases are delivered by download and are referred to as “upgrade releases” (e.g., 9.0, 10.0).
- Minor releases are delivered via download only and are referred to as “update” or “dot releases” (e.g., 8.6, 9.2, 10.0 Update x).

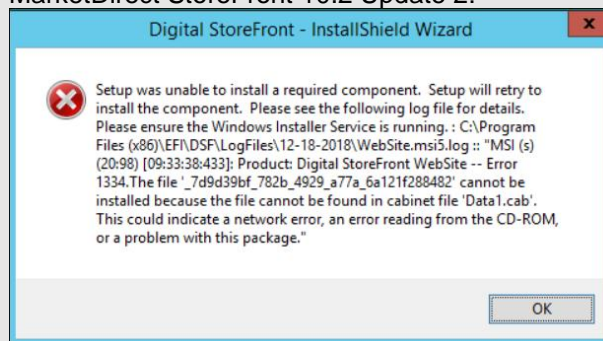

Note Depending on when you are upgrading or updating MarketDirect StoreFront, you may have to apply both a major and a minor release to get to the most current version of the software.

Installing MarketDirect StoreFront

Notes You must allow <https://eflow.myprintdesk.net> in your firewall settings.

Important Installation Note for Self-Hosted Customers:

Follow the steps below if you encounter a required component error when upgrading to MarketDirect StoreFront 10.2 Update 2:

1. Do **not** cancel the installation.
2. Contact support (via the contact information on page 5) for assistance on how to manually uninstall the website.msi and then proceed with completing the installation.

To upgrade from a previous version

- **Upgrading from v. 10.x:**
 - If you are upgrading to MarketDirect StoreFront 10.2 Update 2 from a previous 10 version, you can install MarketDirect StoreFront 10.2 Update 2 directly following these steps:
 - Click this link [MDSF 10.2 Update 2](#) and save the file.
 - Go to the *To install MarketDirect StoreFront* section on page 8 and follow the steps beginning with step 4.
- **Upgrading from v. 9.x:**
 - If you are on the previous major release version of MarketDirect StoreFront and are under a support and maintenance contract, you can order an upgrade to the latest version from the

MarketDirect StoreFront upgrade site: <http://w3.efi.com/support/overview/web-to-print-solutions/digital-storefront/upgrade-order-form>.

- For example, if the new release version is 10.x and you are on version 9.x, you can order the upgrade via the link above. If you are on a pre-9 version or not under a support and maintenance contract, however, you will need to contact the EFI Customer Support team for assistance. See page 5 for contact information.
- **Upgrading from v. 8.x or earlier:**
 - If you are on MarketDirect StoreFront v. 8.x or earlier, you must contact the EFI Professional Services team for assistance with your upgrade. See page 5 for contact information.

Note In an effort to improve our customer experience, beginning with MarketDirect StoreFront 10.0, we have changed our software delivery method from FTP to a CDN.

Note MarketDirect StoreFront 10 introduced eFlow license management, which does not require a USB dongle. For more information, see the *MarketDirect StoreFront Installation Guide*.

Note If you are a self-hosted customer migrating your site to a Microsoft Windows 2016 server, please contact EFI Professional Services for assistance with your site migration.

To install MarketDirect StoreFront

1. In the email you received from EFI, click the link for the MarketDirect StoreFront 10.2 Update 2 software installer and download it to a temporary folder.
2. Go to the temporary folder and double-click the **setup.exe** file to run the installer.
3. Follow the appropriate instructions below for your browser:
 - (Internet Explorer) When prompted to run or save the file, choose the **Save As** option, select a folder on your local drive in which to save the file, and then click **Save**. When the download is complete, click the file to begin the extraction process.
 - (Firefox) When prompted on the Opening... dialog, click **Save File**. The file will download to your default download folder. When the download is complete, click the file to begin the extraction process.
 - (Chrome) The file download will begin automatically and be saved in your default download folder. When the download is complete, click the file to begin the extraction process.
4. After the files are extracted, go to the extraction folder.
5. Double-click the **[MDSF version].exe** file.
6. In the Welcome window, click **Next**.

Note Download the *MarketDirect StoreFront 10.x Installation Guide* available from the link in the email you received from EFI and consult it before proceeding with the installation.

7. Specify a destination folder or accept the default (C:\inetpub\wwwroot\DSF\WebSite).

Note 1. Verify settings in the "Installation Summary" and then click **Next**.
2. During an update installation, a web page will open. Review the page results then close it.

8. Follow the instructions provided in the Finish window.

Note You are now finished *unless you need to install SmartCanvas* (see the section below).

To install SmartCanvas

Important Notes for self-hosted installations using both MarketDirect StoreFront and Smart Canvas:

If you are upgrading to MarketDirect StoreFront 10.2 Update 2 from an earlier version, you must upgrade SmartCanvas to v. 8.2.

Important The SmartCanvas Server component *cannot* be installed on the same server as MarketDirect StoreFront. Please consult the SmartCanvas server component system requirements section on page 26 of this document and ensure that the server you will be installing SmartCanvas on meets or exceeds the system requirements.

If you will be installing SmartCanvas on a dedicated server (one that is not running MarketDirect StoreFront, EFI VDP or Cross Media):

Proceed to the installation and activation following the instructions in the *MarketDirect StoreFront - SmartCanvas Installation Guide* (which you will obtain in a step below).

OR

If you are using EFI VDP or MarketDirect Cross Media and want to install SmartCanvas on your existing MarketDirect (formerly DirectSmile) server, SmartCanvas can be installed on that server but only with the assistance of the EFI MarketDirect (formerly DirectSmile) team who will contact you within five (5) business days. To schedule an installation appointment with the EFI MarketDirect Support Team, please visit <http://update.directsmile.com> and enter the SmartServer System ID you received with your MarketDirect StoreFront license key.

Important: *You must not attempt to install SmartCanvas on your existing EFI VDP or MarketDirect Cross Media server without first securing the assistance of the EFI MarketDirect team.*

1. After installing MarketDirect StoreFront 10.x, download the following files from the links in the email you received from EFI:
 - SmartCanvas_[version number].exe file
 - *SmartCanvas Release Notes*
 - *MarketDirect StoreFront – SmartCanvas Installation Guide* (PDF)
2. Double-click the **SmartCanvas_[version].exe** file.
3. After the file extracts, copy the SmartCanvas_SmartCanvas_[version number].exe (self-extracting exe) file into the C:\Temp folder on the SmartCanvas server and follow all instructions in the *MarketDirect StoreFront – SmartCanvas Installation Guide* (PDF) that you downloaded from the link in the email your received from EFI.

Note Read and follow the instructions in the *MarketDirect StoreFront – SmartCanvas Installation Guide*.

4. On the SmartCanvas server, double-click **C:\Temp\SmartCanvas_SmartCanvas_[version number].exe** to extract.

The MarketDirect StoreFront Forum is Online: Register Today

The MarketDirect StoreFront Forum is a place where users of EFI's industry-leading Web-to-Print solution can come to share experiences with other members of the MarketDirect StoreFront community. There are user forums for sharing information on integration with management information systems (MIS) such as Logic™, Monarch, Pace™, and PrintSmith™. Additional forums provide user-to-user information on

variable data printing (VDP) with EFI VDP, FusionPro, and XMPie solutions and on integrations with EFI Fiery®, Fiery XF, and MicroPress® print systems.

Visit <http://dsfforums.efi.com/> to join the MarketDirect StoreFront Forum today and enjoy the benefits:

- Interact with and learn from others in the MarketDirect StoreFront user community.
- Share helpful tips and experiences on “best practices” and workflow solutions.
- Connect with the community of MarketDirect StoreFront users.
- Receive periodic updates on upcoming events related to MarketDirect StoreFront.

Important Please be aware that the MarketDirect StoreFront Forum is *not* a place to request or receive formal technical support from EFI support personnel, engineers, or professional services. If you are experiencing an issue that is beyond the scope of help that other MarketDirect StoreFront users can provide, please contact EFI’s MarketDirect StoreFront support team to receive formal, trackable support (contact information is on page 5).

Important Notes and Notices

Operating System Support

New installations of MarketDirect StoreFront 10.x are supported only on Windows Server 2012 R2 and Windows Server 2016 operating system.

System Requirements and Database Backup

- Please ensure that the server you are upgrading meets the minimum system requirements for MarketDirect StoreFront 10.x as specified on page 21.
- Upgrading customers who are connected to a local instance of SQL: You must select the option during installation to perform a database backup before upgrading to MarketDirect StoreFront 10.x.
- Upgrading customers who are connected to a remote instance of SQL: You should not select the installation option during installation to perform a database backup before upgrading to MarketDirect StoreFront 10.x.

SQL Server

MarketDirect StoreFront 10.x requires SQL Server 2012 (64-bit) or SQL Server 2014 (64-bit) or SQL Server 2016 (64-bit). If you complete the default installation of MarketDirect StoreFront, which installs Microsoft SQL Server Express 2014, you will not (later) be able to configure MarketDirect StoreFront to run with a lower version of SQL Server database cluster (e.g., a 2014 database cannot be mounted in a 2012 environment).

Note **SQL Express Upgrades:** The installer can only upgrade a locally installed version of SQL Server Express. If you do not have a locally installed version of SQL Server Express, you *must* upgrade SQL Server.

Pause During Installation

The installation process can appear to get stuck on “Stopping EFI.DSF.PdfService service” and “Stopping MarketDirect StoreFront Conversion Service.” It is not stuck, however, but merely waiting for the services to stop and shut down. Please note that the wait can be 4–6 minutes for each service.

Crystal Reports Installation

Note that the error message below may show several times during installation of the Crystal Reports component. Simply click **Ignore** to continue installation and disregard the message.

MarketDirect StoreFront EULA

Please be aware that if any member of the administrator group accepts the end user license agreement (EULA), it is accepted for all.

Important Note on Authorize.Net Payment Gateways

Note The information in this section applies to both Authorize Net and Authorize.Net-Relay Response merchant accounts.

MarketDirect StoreFront (MDSF) v. 10.2 Update 1 introduced updated plugins to support Authorize.Net's pending conversion from MD5 hash to SHA-512 hash for enhanced security.

Note For more information on this security change, visit <https://support.authorize.net/s/article/What-is-the-MD5-Hash-Security-feature-and-how-does-it-work>.

This new feature requires a Signature Key. Complete the steps below *after you upgrade to MDSF 10.2 Update 2* to generate your key and enter it for your site:

1. Log into the Authorize.Net merchant site.
 - On the **ACCOUNT** menu, select **Settings** → **API Credentials & Keys**.
 - Select **New Signature Key** and then click **Submit**.
 - Complete the verification step (a pin will be sent to your registered email).
 - Copy the generated key to your Windows clipboard.
2. Log into your MarketDirect StoreFront site (upgraded to v. 10.2 Update 1 or 2).
 - Go to **Administration > Credit Card Management and Configuration > Merchant Accounts**.
 - Click the edit icon for your Authorize.Net account.
 - Scroll down to the Account Setup – Authorization (Mandatory Fields) section and select the **Use SHA512** checkbox.
 - Paste the key from your clipboard into the **Signature Key** field.

Account Setup - Authorization (Mandatory Fields)

Login Id

Transaction Key

Text for Return Button

Use SHA512(Signature Key is must if this is turned on)

Signature Key

Save Cancel Test

3. Click **Save**.

Support for TLS 1.2 Enhanced Security Features for Merchant Accounts

Beginning with v. 9.6 by default MarketDirect StoreFront supports TLS 1.2 for all merchant account plugins.

Email Notifications

Please be aware that if you are on an older browser and using compatibility mode, you may not be able to add system variables to the following email notifications at either the site or the company level:

- General Message: Rejected User Registration
- Location Message: New Order Notification
- Print Shop Message: Order Status Change
- Buyer Message: Order Approved
- Buyer Message: Order Declined
- AuctionInc CSR E-Mail: Request to use EFI's AuctionInc Account id
- Spending Account Message: Spending Account Limit Exceeded during MIS Job Total Update
- Buyer Message: Background Upload Status
- Order Approval For Approvers

AuctionInc

Please direct all questions related to AuctionInc setup and operation to MarketDirect StoreFront Technical Support (for contact information see page 5), *not* to AuctionInc Technical Support.

Customized SmartStore Storefronts

New releases of MarketDirect StoreFront typically introduce new features that require changes and additions to the CSS (cascading styles sheet) styles that define the appearance of SmartStores.

Notes If you have not made any advanced customizations to the CSS of the default SmartStores, you do not need to take any action and can disregard this notice.

Classic storefronts will continue to work as before, and newly created sites will work with no issues.

If you have made changes to the CSS of your SmartStore storefronts and intend to use the new features, you will need to complete the appropriate action below to reconcile your customized CSS with the new CSS features to ensure that your SmartStore storefronts are displayed properly.

Recommended workflows:

- If you have made only minor customizations to your SmartStore storefront(s) CSS (such as changing the color of buttons or a typeface of certain label classes), we recommend that you complete “Workflow 1 for SmartStores with Minor Customizations” on page 29.
- If you have made more extensive changes to your SmartStore storefront(s) CSS (such as modifying the behavior of certain elements such as the hover action on certain button classes), we recommend that you complete “Workflow 2 for SmartStores with Major Customizations” on page 31.

CyberSource (Self-Hosted Customers)

This statement applies only to self-hosted MarketDirect StoreFront customers who use CyberSource for payment processing:

Please be aware that if you have used MarketDirect StoreFront’s bulk user import (via the Export / Import page) and the state and/or zip code information data was invalid, certain credit card transactions will possibly fail. To mitigate this risk, you will need to do one of the following:

- If you wish to disable the auto-filling of user profile fields from MarketDirect StoreFront in Cybersource page (i.e., thus requiring users to enter their full billing details with each transaction):
 - A. Go to **Administration > Platform Settings > Credit Card Management and Configuration**.
 - B. Click **Merchant Accounts**.
 - C. In the merchant accounts table, select the **Cybersource Secure Acceptance** check box for the merchant account you want to edit.
 - D. Click the **Edit** icon.
 - E. Under **Account Setup – Authorization (Mandatory Fields)**, select the **Disable Billing Address Autofill** check box.

OR

- If you would like to clear the invalid data, please contact the MarketDirect StoreFront technical support team via the contact information on page 5.

Server-Side Conversion of Microsoft Office Files

For the conversion of Microsoft Office files to work correctly, you must make sure that Microsoft Office is running in 32-bit architecture to match MarketDirect StoreFront’s file conversion utility, which runs in 32-bit because it depends on other 32-bit applications to perform the file conversion. *MarketDirect StoreFront does not support the 64-bit version of Microsoft Office at this time.* For a list of supported versions please see the System Requirements - Software and Component Requirements on page 22 of this document.

For Microsoft Excel files to convert properly, make sure the operating system’s locale settings (i.e., region and language options) match the language used in Excel.

MarketDirect StoreFront and Virtual Environments

- MarketDirect StoreFront can be installed in a virtual environment.
- Although EFI MarketDirect StoreFront Technical Support will not consider you “out of contract” if you are running MarketDirect StoreFront on a virtual machine, EFI does not provide technical support for virtual environments or for running MarketDirect StoreFront in a virtual environment. For MarketDirect StoreFront customers with a current support agreement, EFI will use commercially reasonable efforts to investigate potential issues with MarketDirect StoreFront software running on a virtual machine. As part of that investigation, EFI may require the issue to

be reproduced independently from the virtual machine environment. Where issues are confirmed to be unrelated to the non-virtual environment, EFI will support its MarketDirect StoreFront software in a manner that is consistent with support provided when that software is not running in a virtual environment. To clarify: Though it is possible to run MarketDirect StoreFront in a virtual environment, EFI does not provide technical support for virtual environments or for running MarketDirect StoreFront in a virtual environment. EFI understands that MarketDirect StoreFront can be used in a virtual environment if that environment supports USB (necessary for the dongle), and EFI will support the MarketDirect StoreFront software (see the item above and the general MarketDirect StoreFront system requirements). EFI will not be responsible for your virtual environment or the setup of your virtual environment.

MarketDirect StoreFront and DNS Setup

EFI does *not* provide technical support for DNS setup in either self-hosted or EFI-hosted environments.

StoreFront Studio

As of MarketDirect StoreFront 9.2, EFI eliminated StoreFront Studio and replaced it with two new desktop licenses:

- If you purchase EFI VDP, you will receive two Direct Smile VDP licenses – one for creating VDP templates to upload to MarketDirect StoreFront and one for desktop VDP production.
- If you purchase Image Personalization, you will receive two Direct Smile VDP Studio licenses – one for creating VDP templates and personalized image sets to upload to MarketDirect StoreFront and one for desktop VDP production.

EFI VDP Support

After performing a new or update install of MarketDirect StoreFront, follow the steps below to ensure you are running the very latest version of the EFI VDP desktop application (i.e., the version with all the latest patches applied):

1. Open the EFI VDP desktop application.
2. Open the help module.
3. Download and install any available patches.

Third-Party VDP Support: XMPie® and FusionPro®

Note *XMPie should be installed and run on a separate server (not the MarketDirect StoreFront server) as XMPie may require additional system resources that can affect the performance of MarketDirect StoreFront.*

FusionPro should be installed and run on the MarketDirect StoreFront server.

- **XMPie 9.4.1 Support**
 - MarketDirect StoreFront supports XMPie 9.4.1 with Adobe InDesign Creative Cloud Server 2019.

Notes To obtain the current version of XMPie go to <http://w3.efi.com/support/overview/web-to-print-solutions/digital-storefront/upgrade-order-form>. Please select customer hosted or cloud depending on which type you have. Please note that prior versions of XMPie that EFI has delivered will work with MarketDirect StoreFront 8.x, so upgrading to the latest version is optional.

Be aware that there may be issues with XMPie templates built in XMPie uProduce

versions 5 or earlier when they are processed in MarketDirect StoreFront with XMPie version 6 or later (e.g., issue reference 29165 in which times were including the seconds—4:30 was rendered 4:30:00). You are advised to update your templates in XMPie uProduce v. 6 or later.

- XMPie contains two parts that can be downloaded, the XMPie mini-server and XMPie uDirect Standard/Classic.
 - **XMPie941-Miniserver.exe** contains the files needed to install XMPie for the server side functionality.
 - Copy this file to the server that will run the XMPie server-side application.
 - Double-click the exe file to uncompress the installer.
 - Execute the installer and follow the on-screen instructions.
 - **XMPie941-uDirect-designer.exe** contains the files needed to install XMPie client-side applications for PC and Mac, XMPie uDirect Standard/Classic and XMPie designer.
 - Copy this file to the computer.
 - Double-click the exe file to uncompress the installer.
 - For PC users: Execute the installer and follow the on-screen instructions for installing this on a PC.
 - For MAC users: Copy the DMG file from the MACOS folder to complete installation.
- XMPie licenses included:
 - 1 – Mini-server license
 - 1 – uDirect Standard/Classic license
 - Unlimited – Designer licenses
- **FusionPro Suite 10.1 Support**
 - FusionPro has several components: the FusionPro VDP Producer API, the FusionPro Desktop VDP Creator (which used to be called Server), and the FusionPro Designer.
 - FusionPro includes:
 - 1 - Producer license
 - 1 - Creator license
 - 2 - Designer licenses (i.e., for 2 installations)

Notes If MarketDirect StoreFront is customer-hosted, and you are under an active maintenance agreement, you can order the upgrade disk at <http://w3.efi.com/support/overview/web-to-print-solutions/digital-storefront/upgrade-order-form>. You will need to provide your dongle number and a shipping account number to get the new software. The upgrade kit contains the licenses that enable FusionPro VDP Producer API and FusionPro Desktop VDP Creator installation.

A new FusionPro license is needed only for a major release of FusionPro (e.g., 9.0, 10.0). So if you have a license for FusionPro 9, you do not need to upgrade your license to run FusionPro 10.0.x. If you have a license for FusionPro 8 or earlier, however, you will need to obtain a license to run the latest version of FusionPro (i.e., 10.0.x).

Notes

Custom reports (EFI-hosted customers)

Custom reports for cloud-based (EFI-hosted) customers must be developed by EFI Professional Services. Cloud-based customers, please contact EFI Professional Services if you need to have custom reports developed. (For EFI Professional Services contact information, see page 5.)

EFI Fiery JDF support

A ticket template that offers both binding and stapling is possible in MarketDirect StoreFront, but this combination is incompatible with JDF. In the rare event that a customer requests binding with stapling, MarketDirect StoreFront's JDF job ticket will only request the binding. This is by design and is part of JDF.

Storefront creation and editing

When you create or edit storefronts, MarketDirect StoreFront clears its cache to ensure that your storefronts are saved properly. After clearing the cache, the system will reload the pages on your site. While the pages are reloading, the performance of the site will be slower than normal. To minimize the impact on customer experience, EFI strongly recommends that you create and edit storefronts during non-peak hours.

Self-hosted MarketDirect StoreFront server migration

If you are a self-hosted customer and are migrating to a different MarketDirect StoreFront server, this procedure is not covered under your SMA Support Agreement with EFI. If you require assistance with this migration, you can engage the EFI Professional Services Group (please note that this is a chargeable service). For more information, EFI Professional Services (contact information on page 5.)

Discontinuance of Development & Operational Support for Classic StoreFronts

As announced in the document *MarketDirect StoreFront – EOL Statement 2016-2017*, effective with the release of MarketDirect StoreFront v. 10.0, EFI discontinued engineering support for Classic Storefronts in MarketDirect StoreFront and supports only SmartStore storefronts (introduced in 2014 to provide a buyer interface built using the latest web standards—HTML5 and responsive design—to provide greater consistency and compatibility across browsers and devices). As of the release of MDSF 10, EFI no longer provides engineering support for classic storefronts (no further development or bug fixes).

Note Although existing classic storefronts will be retained and you will be able to continue to manage existing classic storefronts, we strongly encourage you to deploy all storefronts as SmartStores rather than classic storefronts.

External System Connector (ESC)

Note that there is an improved process for strict XSD-compliance that will make the resulting integrations easier to write using schema-parsing utilities by generating XML that is fully compliant with XSDs. This will thus accelerate your external application development.

Although use of this process is optional, we recommend that all new customers use this process as well as any existing customers who want to improve their existing integrations to leverage modern coding techniques via autogenerated code using XSDs.

If you want to use this compliant mode, contact MarketDirect StoreFront Support (contact information is on page 5) to enable this setting. Then when you visit the URL you will gain access to a ZIP file containing all required files.

Note If you opt to continue with the older XML output, there is no need to call MarketDirect StoreFront Support or do anything else.

Features Supported in SmartStores and Not in Classic Storefronts

- Digital downloads (7.4)
- Product matrix (7.4)
- EFI VDP (7.6)
- Direct mail integration – AccuZIP (7.6)
- Digital download enhancements (7.6)
- Company-level language management (7.6)
- Active Directory with Federated Identity Services (7.6)
- Entity storefronts (8.0)
- Single-Page Previews (8.2)
- Fulfillment Categories (8.2)
- Products Displayed in List or Grid View (8.2)
- Combo Mode for EFI VDP and FusionPro Products (8.2)
- Fast Shopping (8.2)
- Intelligent ticketing enhancements: ability to enforce and recommend ticket options during order process (8.2, 8.4)
- Dynamic Web Forms (and work only with the HTML5 Visual Product Builder, not with the classic product builder) (8.4)
- Cross Media Marketing (9.0)
- SmartCanvas (9.2)
- Job-level approvals (9.6)
- Approver job editing (9.6)
- Checkout as guest (9.8)

Features Introduced in MarketDirect StoreFront 10.2 Update 2

- **CardConnect Payment Gateway**
MarketDirect StoreFront now supports integration with the CardConnect payment gateway.
- **Expanded Support for MIS Integrations**
MarketDirect StoreFront 10.2 Update 2 introduces support for Metrics and Shuttleworth.

Issues Resolved in MarketDirect StoreFront 10.2 Update 2

- **SmartCanvas preview.pdf**
Resolved the issue that was causing the Preview.pdf embedded in SmartCanvas product orders to be missing in certain cases. (Issue Reference: 45306)
 - **Importing images to the Image Gallery**
Resolved the issue that was causing slow import of images to the Image Gallery. (Issue Reference: 45252)
-

- **Company association for self-registering users**
Resolved the issue that was causing self-registering users to be associated with the wrong company. (Issue Reference: 41700)
- **Maximum number of jobs**
Resolved the issue that was preventing setting a limit of 200 or more. (Issue Reference: 42681)
- **Display as name for Non Printed Products**
Resolved the issue that was preventing the Display as name specified in the product settings from showing for Non Printed Products. (Issue Reference: 39448)
- **File and production file links**
Resolved the issue that was causing an “Anonymous file download is disabled...” error when users clicked links to files or production files. (Issue Reference: 45503)
- **Product type settings: Product name and display as name**
Resolved the issue with product type settings that was causing product name and product display as name on shopping cart and order approval screens to be incorrectly represented after upgrade to MDSF 10.2. (Issue Reference: 44944)
- **Support for SQL Server 2016**
Support for SQL Server 2016 was added, which will (among other things) prevent errors when upgrading to MDSF 10.2x. (Issue Reference: 44945)
- **Same company name across entities**
Support was added for same company name in multiple entities. (Issue Reference: 45834)
- **User order history across entities**
The system now prevents creation of duplicate user names in different entities. (Issue Reference: 45835)
- **MDSF users pushed to PrintSmith Vision**
Resolved the issue that was causing new users pushed from MDSF to PrintSmith Vision to be placed in the Registered Users group at the parent level rather than at the sub-entity level. (Issue Reference: 45298)
- **Authorize.net orders**
Resolved the issue that was preventing Authorize.net credit card orders from being sent through for authorization. (Issue Reference: 43068)
- **Time-out issue with large SmartCanvas templates**
Resolved the issue that was causing a SmartCanvas preview process to time out for products associated with large-data size templates. (Issue Reference: 45726)
- **Security enhancements**
This release introduces a number of security configuration enhancements aimed at preventing vulnerability to Stored Cross Site Scripting. The password reset functionality was also enhanced and now sends a time-bound link for password reset (rather than a plain-text temporary password). Finally, temporary account lockout rules are now being enforced appropriately.

Known Issues in MarketDirect StoreFront 10.2 Update 2

- **EFI SmartCanvas**

Note: Limitations of SmartCanvas include:

- No support for small format mobile devices (e.g., cell phones)
- Tablet formats are supported
- Maximum of 61 megapixels for uploaded images
- Maximum document size limit is 200x200 inches

- **Text frames locking up in Microsoft Edge browser**

Text frames in SmartCanvas lock up in some instances in Microsoft Edge browser. (Issue Reference: DIRSMILE-2060)

- **Selecting an imposition from the production job ticket**

When a different imposition layout is selected for a SmartCanvas job from the Production Job Ticket and the artwork is regenerated, the preview of the production PDF will continue to show the default imposition until the Production Job Ticket page is manually refreshed. (Issue Reference: 29527)

- **Size of SmartCanvas gallery image thumbnails**

After an image from a MarketDirect StoreFront image gallery is used on a design template, the size of the thumbnail in the SmartCanvas image gallery will increase. (Issue Reference: DIRSMILE-360)

- **Pricing SmartCanvas products with N-up and brochure impositions**

The N-up and brochure imposition settings set in SmartCanvas are used only to define the production PDF for the product. For pricing purposes, configure the N-up settings for the MarketDirect StoreFront product associated with the design template on the Product > Settings page to be consistent with the imposition you defined for the template in the SmartCanvas designer. (Issue Reference: 30011)

- **Font size in large format SmartCanvas products**

On very large SmartCanvas products (e.g., a banner 200x200”), be sure to create the first used text style (i.e., used in a text object on the design template) with a large font size so that the sample text (e.g., “Enter text here”) will be visible to buyers. (Issue Reference: 30084)

- **Production PDFs not generated for SmartCanvas products**

Production PDFs will not be generated for SmartCanvas products associated with a template that has an imposition layout with a special character(s) in its name. The Production Job Ticket will remain in a *waiting for PDF generation* state. Avoid using special characters when naming your SmartCanvas imposition layouts. (Issue Reference: 39366)

- **Miscellaneous**

- **CorelDRAW PDF conversion issues**

Due to a limitation in a third-party component, CorelDRAW (CDR) files are not converted to PDFs correctly. (Issue Reference: 32897)

- **Inverted/missing colors in PDFs**

Due to a limitation in a third-party component, automatic thumbnails in static products and files uploaded for ad hoc products may have missing or inverted colors in the preview. (Issue Reference: 32634)

- **Fiery XF mapping**

After media is mapped from the Fiery XF, print services are being created in MarketDirect StoreFront (based on information in Fiery XF) for which the capabilities do not exist in MarketDirect StoreFront. (Issue Reference: 26423)

- **Operator View filter option Scheduled Tasks**

The new link Scheduled Tasks in the filter on the Operator View is not currently working.

(Issue Reference: 23852)

- **Line breaks in email notifications**

Line breaks in email notifications are not being displayed in Microsoft Outlook due to a known issue in Outlook (by which it strips out line breaks per a proprietary algorithm).

Workaround: Add an additional period at the end of each line in the email notification (i.e., where a line break should fall). The line break will then work as expected (though there will be an extra period at the end of those lines).

- **Email variables**

Depending on the credit card processing system/gateway/method being used, some variables available for use in the “Credit card transaction failed” email notification may not have values available to populate the message at the time it is sent. This results from the manner and timing of when order information is saved in MarketDirect StoreFront credit card payment workflows. (Issue Reference: 34524)

- **Job weight not calculating correctly for N-up enabled products**

When a product’s final production dimensions are smaller than the media dimensions (because n-up is enabled), the weight per finished item is not being calculated correctly (i.e., the full media weight is not used). (Issue Reference: 26760)

Workaround: You can resolve the issue by including the Final Width and Height print service on the Ticket Template associated with the product and selecting the default size in the product settings.

Note The Final Width and Height print service does not need to be displayed to the buyer for this to work.

- **Pagadito orders placed using short URL**

Orders placed on a site using a short URL are now processed correctly through Pagadito payment gateway. (Issue Reference: 31563)

- **USAePay payment processing order number**

The order number for all orders paid for with USAePay payment processing will be reported at -1 on the Payment Approved confirmation window. (Issue Reference: 29869)

- **MIS orders**

MIS orders are not going to the MIS when the administrator changes the status from Approval Required to Approved/User Approved. (Issue Reference: 28162)

- **SmartStores**

Note About SmartStores in v. 9x:

1. On SmartStore storefronts, only the basic page in Company Order History is available; on Classic storefronts, the order details page continue to be available.
2. In the CSR workflow, the Search page uses the Classic storefront theme.
3. When a text logo is used for a SmartStore storefront, and an administrative user opens the Administration page, no logo is shown in the banner.

To use the following features introduced in v. 8.2, Fast Shopping, Fulfillment Shopping, and List View on a storefront, the CSS for that storefront must be reconciled with any previous customizations.

- **File uploads**

No message is displayed after files are uploaded on the My Saved Files > Add Files page in SmartStores. (Issue Reference: 28017)

- **SmartStore Builder**

The last name / first name link in the upper right-hand corner of the SmartStore Builder reloads the current page. (Issue Reference: 21366)

- **Portrait mode with keypad on iPad**
When a buyer is using an iPad in portrait mode and the keypad is opened, the display is distorted on the ad hoc product customization page in the Visual Product Builder. (Display in landscape mode is correct.) Note that it is recommended that users disable Private Browsing on mobile devices when using SmartStores. (Issue Reference: 28175, 29870)
- **Shopping cart calendar**
The arrows to change the month on the calendar in the Shopping Cart are missing on the Magic SmartStore storefront theme in Internet Explorer 10. (Issue Reference: 19152)
- **Captcha code during registration**
When a buyer is registering on a mobile device and if Captcha code security is enabled, a new Captcha code is shown after the buyer chooses a print shop. (Issue Reference: 19643)
- **Static products and page-level modifications**
Administrator-defined page-level modifications – such as adding blank pages, deleting pages, or rearranging pages – are not reflected in the SmartStore UI for static products. (Issue Reference: 26624)
- **Variable Data Products (VDP)**
 - **EFI VDP: Post-upgrade unable to render products**
EFI VDP may be unable to read Basic VDP job databases after upgrade to v. 7.8.6.
Workaround:
 - (1) Open Control Panel and navigate to **Add and Remove Programs**.
 - (2) Locate the program **Microsoft Access Database Engine 2010**.
 - (3) If there are two entries, a 32-bit and a 64-bit version of the Microsoft Access Engine 2010, please uninstall both engines and reinstall the 32-bit version only.
 - (4) Restart all production servers to ensure that the VDP components are using the 32-bit version.
 - **XMPie products: DIAL text fields not available for mapping**
DIAL text fields in XMPie products are not available for mapping on the Map Data page. (Issue Reference: 23589)
 - **Auto submit does not work for batch mode EFI VDP products**
Auto submit functionality is not working for batch mode EFI VDP products. (Issue Reference: 31785)
- **VAT Calculation**
VAT and order pricing are miscalculated when a buyer reorders a product whose VAT rate has been changed between the original order and reorder. This issue occurs in the following scenario: Buyer A orders product B with a VAT rate set at rate X (e.g., 8%). The administrator then changes the VAT rate of product B to rate Y (e.g., 10%). Buyer A then reorders product B. Result: The VAT and order pricing calculations are incorrect. (Issue Reference: 33158)

System Requirements

Please ensure your system meets the following minimum requirements before beginning the installation process.

Important Please ensure your Windows operating system is fully up to date and that you have installed all available security patches and updates prior to installation. Disable all pop-up blockers before installing.

Additional guidelines on the IT environment requirements for running MarketDirect StoreFront are available upon request from MarketDirect StoreFront Technical Support (for contact information see page 5).

MarketDirect StoreFront Server Requirements

Note MarketDirect StoreFront should be installed and run on a dedicated separate server.

Hardware Requirements

<i>Processor</i>	1.8+ GHz processor 4 CPU cores
<i>RAM</i>	8+ GB Note Rendering files (such as in the display graphics industry) will require more RAM. We suggest a minimum of 12 GB for such environments including customers who plan to utilize SmartCanvas products.
<i>Hard disk</i>	250+ GB Note 25+ GB hard disk space must be available on the operating system drive even if MarketDirect StoreFront is installed on a different drive. This accommodates components that are installed on the operating system drive such as Windows Updates, Microsoft SQL Server, and third-party components.
<i>External Ports</i>	1 Ethernet 10/100/1000 BaseT NIC
<i>Display</i>	Monitor that supports 1024 x 768 or higher resolution

Software and Component Requirements

<i>Operating System</i>	MarketDirect StoreFront server supports only the operating systems listed below: <ul style="list-style-type: none"> • Microsoft Windows Server 2012 R2 (64-bit) with IIS 8 / Message Queuing (Standard) • Microsoft Windows Server 2016 (64-bit) with IIS 10 / Message Queuing (Standard) Note The server must be set up as an Application Server and not as a File Server for MarketDirect StoreFront to install properly.
<i>For MarketDirect StoreFront Site Administration</i>	<ul style="list-style-type: none"> • Microsoft Windows Note MarketDirect StoreFront website administration (the functionality on the Administration pages) is supported <i>only</i> on a machine running Microsoft Windows <ul style="list-style-type: none"> • Java Runtime Environment (JRE) 1.8 or later Note Please install the 32-bit version of Java even though you are on a 64-bit machine because the Design Studio uses Flex, which does not support 64-bit Java.

<i>For Server Side PDF Conversion</i>	Microsoft Office 2007, 2010, or 2013 Professional (32-bit) with .NET programmability option set to “Run from My Computer” for all applications in the Office suite.	
<i>For File Preflighting</i>	Java Runtime Environment (JRE) 8	
<i>Web Browser</i>	Internet Explorer 8, 9, 10, 11 Mozilla Firefox 57, 58, 60 Safari 10.0, 11.0 (Mac)	Google Chrome 72, 73, 74 Microsoft Edge 44 Opera 51
<i>Database Server</i>	<p>Microsoft SQL Server Express 2014 (64-bit) is included with the installation and will be installed if no local SQL components are present on the installation computer.</p> <p><i>Optional (Customer Supplied):</i></p> <ul style="list-style-type: none"> • Microsoft SQL Server 2012 Standard or Enterprise • Microsoft SQL Server 2014 Standard or Enterprise • Microsoft SQL Server 2016 Standard or Enterprise <p>Important MarketDirect StoreFront 9.x requires SQL Server 2012, 2014 (64-bit), or 2016 (64-bit). If you complete the default installation of MarketDirect StoreFront, which installs Microsoft SQL Server Express 2014, you will not later be able to configure MarketDirect StoreFront to run with a lower version of SQL Server database cluster (e.g., a 2014 database cannot be mounted in a 2012 environment).</p> <p><i>SQL Express Upgrade:</i> The installer can only upgrade a locally installed version of SQL Server Express. If you do not have a locally installed version of SQL Server Express, you <i>must</i> upgrade SQL Server.</p>	
<i>.NET Framework</i>	Microsoft .NET Framework 4.5 is required	
<i>MicroPress Support Requirements</i>	To enable MicroPress integration version 7 or higher is needed	
<i>Fiery JDF Connector Support Requirements</i>	<p>For complete information on supported Fiery devices and the hardware and software requirements for integrating Fiery devices with MarketDirect StoreFront via the Fiery JDF Connector, please visit:</p> <p>http://www.efi.com/products/fiery-servers-and-software/fiery-integration/fiery-jdf/overview/</p> <p>Note MarketDirect StoreFront was tested with XF version 6.0.</p>	
<i>Requirements for MIS connectivity through PNI (PrintNet Integrator); note Pace MIS does not use the PNI)</i>	<p>The computer on which you install the PNI must meet the following requirements:</p> <ul style="list-style-type: none"> • Only the operating systems listed below are supported: <ul style="list-style-type: none"> ○ Windows 2003, Windows 2000, or Macintosh OS X 10.3.9 and 10.4.5 • 512+ MB RAM • 200+ MB free disk space 	

	<ul style="list-style-type: none"> • An Internet accessible static IP address. The address must be an Internet facing address that allows inbound traffic on port 10443 (HTTPS) and outbound traffic on port 80, 443, and 9443 (9443 is for PrintSmith only). • Outbound access to the Internet, an “always on” type of connection
--	--

Client-Side Requirements

PrintMessenger

Windows

<i>Processor</i>	1+ GHz processor
<i>RAM</i>	1+ GB
<i>Hard Disk</i>	500+ MB available hard disk space
<i>Operating System</i>	<p>Only the operating systems listed below are supported:</p> <ul style="list-style-type: none"> • Windows Server 2003 SP2, Windows Vista, Windows 7, Windows 8, Windows 10, Windows Server 2008 R2, Windows Server 2012 R2, Windows Server 2016 <p>Note MarketDirect StoreFront supports 32-bit and 64-bit operating systems.</p>
<i>Web Browser</i> <i>*Pop-ups must be enabled</i>	<p>Internet Explorer 8 or later* Google Chrome 72 or later Microsoft Edge 44 or later</p> <p>Mozilla Firefox 60 or later</p> <p>Note SmartStores will not work on Internet Explorer 8 or 9.</p>
<i>Other Software</i>	<ul style="list-style-type: none"> • Microsoft .NET Framework 3.5 and all related Service Packs (SPs) and updates (only version 3.5 – not a higher version – is supported) • Adobe Acrobat Reader 10, 11 Adobe Flash Player 10
<i>Windows Terminal Services Environment</i>	<p>Citrix</p> <p>Note PrintMessenger is supported in a Citrix environment.</p>
<i>Display</i>	Monitor that supports 800 x 600 or higher resolution

Macintosh

<i>Processor</i>	G4+
<i>RAM</i>	1+ GB
<i>Hard Disk</i>	500+ MB available hard disk space
<i>Operating System</i>	<p>Only the operating systems listed below are supported:</p> <ul style="list-style-type: none"> • Macintosh OS 10.11 or later

<i>Web Browser</i>	Apple Safari 10.0.3 or later Mozilla Firefox 39 or later Chrome 72 or later
<i>Other Software</i>	Adobe Acrobat Reader 8, 9
<i>Display</i>	Display that supports 800 x 600 or higher resolution

Remote Print Center (RPC)

Hardware and Software

<i>Processor</i>	2+ GHz processor
<i>RAM</i>	512+ MB
<i>Hard Disk</i>	1 GB available hard disk space (more recommended)
<i>Operating System</i>	Only the operating systems listed below are supported: <ul style="list-style-type: none"> Windows 2008 with IIS 7.0 / Message Queuing, Windows Vista, Windows 7, Windows 2012 R2, Windows 8, Windows 10, Windows 2016 <p>Note MarketDirect StoreFront supports 32-bit and 64-bit operating systems for RPC.</p> Microsoft Web Service Enhancements (WSE) 2.0 SP3
<i>.NET Framework</i>	Microsoft .NET Framework 4.5
<i>Web Browser</i>	Internet Explorer 8 or later
<i>Display</i>	Display that supports 800 x 600 or higher resolution

SmartStores

Mobile Device Platforms

<i>Devices</i>	iPad iPhone 6S or later	Android Mobile Android Tablet
----------------	----------------------------	----------------------------------

Operating Systems

<i>Operating Systems</i>	Only the operating systems listed below are supported: <ul style="list-style-type: none"> Windows 8 or later iOS 10.2 or later Android 6.0.1 or later
--------------------------	--

Browsers

<i>Browsers</i>	SmartStores will work only on the following browsers: <ul style="list-style-type: none"> Internet Explorer 10+ Google Chrome Mozilla Firefox Microsoft Edge
-----------------	---

Mobile Device Platforms

	<ul style="list-style-type: none"> • Apple Safari • Opera <p>Note SmartStores will not work on Internet Explorer 7, 8, or 9.</p> <p>To accommodate site visitors who are still using these earlier versions of Internet Explorer, it is best to create a classic storefront version of any SmartStore that you create. That way, when a visitor to your site is on one of the older browsers, MarketDirect StoreFront will automatically display the classic version.</p> <p>Note MarketDirect StoreFront does have a legacy browser customization feature to jump-start the process of creating the classic version of a SmartStore.</p>
--	--

SmartCanvas

Important Before attempting to install SmartCanvas, please read the section “Installing MarketDirect StoreFront” on page 8 in its entirety.

Requirements for SmartCanvas Server

<i>Processor</i>	64-bit processor, minimum 1.5 GHz and 4 Virtual Cores
<i>RAM</i>	8+ GB
<i>Hard disk</i>	500+ GB (failsafe storage with backup strategy recommended)
<i>Accessibility</i>	<p>Ports Out: 80, 443 Ports In: 80, 443</p> <p>Important The SmartCanvas site should always be secured and must be accessible outside the network.</p> <p>The SmartCanvas server is being set up as an application server.</p>
<i>Operating System</i>	<p>Only the operating systems listed below are supported:</p> <ul style="list-style-type: none"> • Microsoft Windows Server® 2012 R2 or Microsoft Windows Server® 2016 x64 <p>Important EFI SmartCanvas should be installed and run on a separate server (not the MarketDirect StoreFront server) as the application may require additional system resources that can affect the performance of MarketDirect StoreFront.</p> <p>Self-hosted customers who are using EFI VDP or Cross Media can install SmartCanvas on that server <i>with assistance of the EFI MarketDirect team</i>.</p>
<i>Required components</i>	.NET Framework 4.0 must be installed on the computer before you install SmartCanvas

EFI VDP

Note The server that hosts EFI VDP requires an SSL certificate.

Requirements for EFI VDP server

Hardware and Software

<i>Processor</i>	x86- or x64- processor with at least 1.5 GHz and 6 or more virtual cores
<i>RAM</i>	12+ GB
<i>Hard disk</i>	500+ GB (failsafe storage with backup strategy recommended)
<i>Accessibility</i>	<ul style="list-style-type: none"> • Fixed IP-address with 100Mbit Internet connection or higher • RDP access for the EFI network • Ports Out: 80, 443 • Ports In: 80, 443 • To access Silverlight Server Monitor: 943, 4530–4535 • Public SSL certificate (not included)
<i>Operating System</i>	<p>Only the operating systems listed below are supported:</p> <ul style="list-style-type: none"> • Windows Server 2012 R2 or 2016 with activated auto login <p>Note EFI VDP should be installed and run on a separate server (not the MarketDirect StoreFront server) as the application may require additional system resources that can affect the performance of MarketDirect StoreFront.</p>

<i>Display</i>	Monitor that supports 1024 x 768 or higher resolution

Requirements for EFI VDP client software

Note Please refer to the EFI VDP release documentation for client-side system requirements.

Hardware

<i>Computer/Processor</i>	x86 or x64 processor with at least 1 GHz min Note Software runs only on Windows platform, not on MacOS.
<i>RAM (Memory)</i>	2+ GB
<i>Storage</i>	1 GB (250 GB for working directory recommended)
<i>Internet Access</i>	Activation and use of the software requires Internet connection

Software and Components

<i>Operating System</i>	Only the operating systems listed below are supported: <ul style="list-style-type: none"> Windows XP, Windows Vista, Windows 7, 8, 10, Windows Server 2008 R2, Windows Server 2012 R2 or higher
<i>Required Components (not included)</i>	<ul style="list-style-type: none"> Adobe InDesign from version CS or CC (layout creation) MS Office or MS Access Database Engine 2007 and 2010 (database import) Adobe Reader (to preview any output on the server)
<i>Required Components (Installed as Part of Server)</i>	<ul style="list-style-type: none"> .NET Framework 4.0 Visual C++ 2005 SP1 Redistributable Package Visual C++ 2008 Redistributable Package

XMPie /FusionPro VDP (Variable Data Product) Server

Note Please consult the XMPie and FusionPro release documentation for client-side system requirements.

Hardware and Software

<i>Processor</i>	1.8+ GHz dual core processor
<i>RAM</i>	2+ GB
<i>Hard Disk</i>	100+ GB
<i>Operating System</i>	Only the operating systems listed below are supported: XMPie: Windows Server 2016 Note XMPie should be installed and run on a separate server (not the MarketDirect StoreFront server) as the application may require additional system resources that can affect the performance of MarketDirect StoreFront. FusionPro: Windows Server 2008, 2012 R2, 2016 Note FusionPro must be installed and run on the same server as the MarketDirect StoreFront server.
<i>Zip Decompression</i>	WinZip v. 14 or higher

Hardware and Software

<i>Display</i>	Monitor that supports 1024 x 768 or higher resolution
----------------	---

Software VDP Plug-Ins

<i>FusionPro Designer/Creator</i>	<ul style="list-style-type: none"> Adobe Acrobat 8, 9, 10, 11, DC 2015, DC 2017, DC 2018 (Optional) Additional plug-ins for Adobe InDesign CS6, CC, CC 2014, CC 2017, CC 2018 <p>Note Please refer to the FusionPro release documentation for client-side system requirements.</p>
<i>XMPie Designer/uDirect Classic</i>	<p>Adobe InDesign CC19</p> <p>Note Please refer to the XMPie release documentation for client-side system requirements.</p>

Appendix A: Workflows for Reconciling CSS

Note If you have made changes to the CSS of your SmartStore storefronts and intend to use one or more of the new features introduced in MarketDirect StoreFront 7.6, you will need to complete the appropriate action below to reconcile your customized CSS with the new feature CSS to ensure that your SmartStore storefronts are displayed properly.

Workflow 1 for SmartStores with Minor Customizations

1. Go to **Administration > Storefront Customization**.

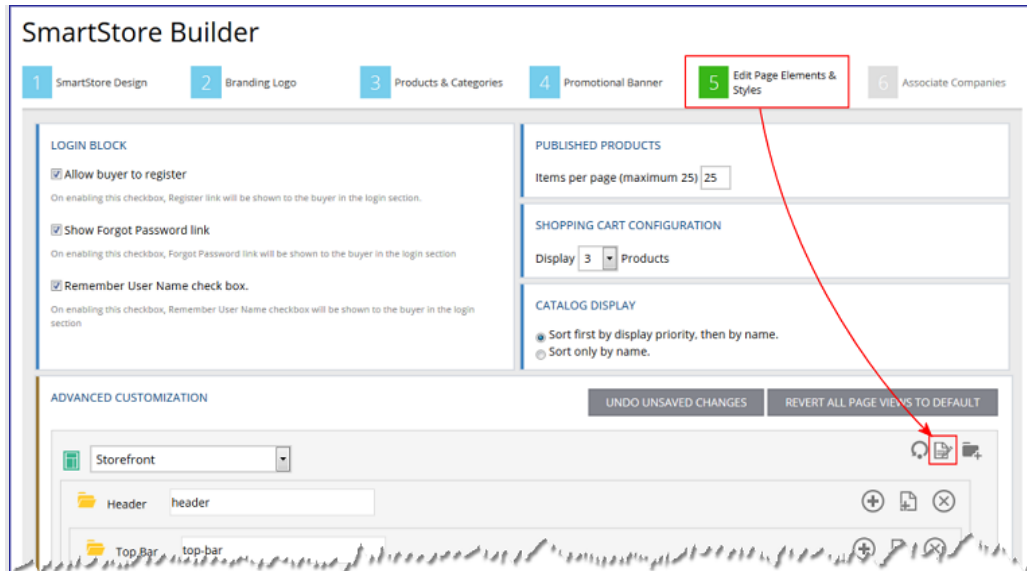

The screenshot shows the 'Storefront Management' page in the MarketDirect StoreFront Administration interface. At the top, there is a navigation bar with 'Home', 'Cart (1)', 'My Account', 'Order Status', 'Print Shops', 'Contact Us', and 'Logout'. Below this, there is a 'Welcome Robert Martin!' message and a 'Logout' link. The main content area is titled 'Storefront Management' and includes a search bar, a 'Show: 10' dropdown, and '1-4 of 4' pagination. There are buttons for 'Delete', 'Set as Default', and 'Duplicate SmartStore'. A 'Remaining Licenses: 9995 out of 9999' indicator and an 'Add StoreFront' button are also present. The table below lists the storefronts:

Storefront	StoreFront Type	Associated Companies	Classic StoreFront for Legacy Browsers
GMO	Classic		
GMO-StoreFront	SmartStore	GMO	Click here
None_StoreFront	Classic	None	
The Daily Grinder (Default)	Classic	The Daily Grinder	

At the bottom of the table, there are buttons for 'Delete', 'Set as Default', and 'Duplicate SmartStore', along with another 'Add StoreFront' button. The pagination at the bottom shows 'Show: 10' and '1-4 of 4'.

2. Make a backup of your existing CSS style sheet before making any changes to it so that you can recover if need be. To do so:

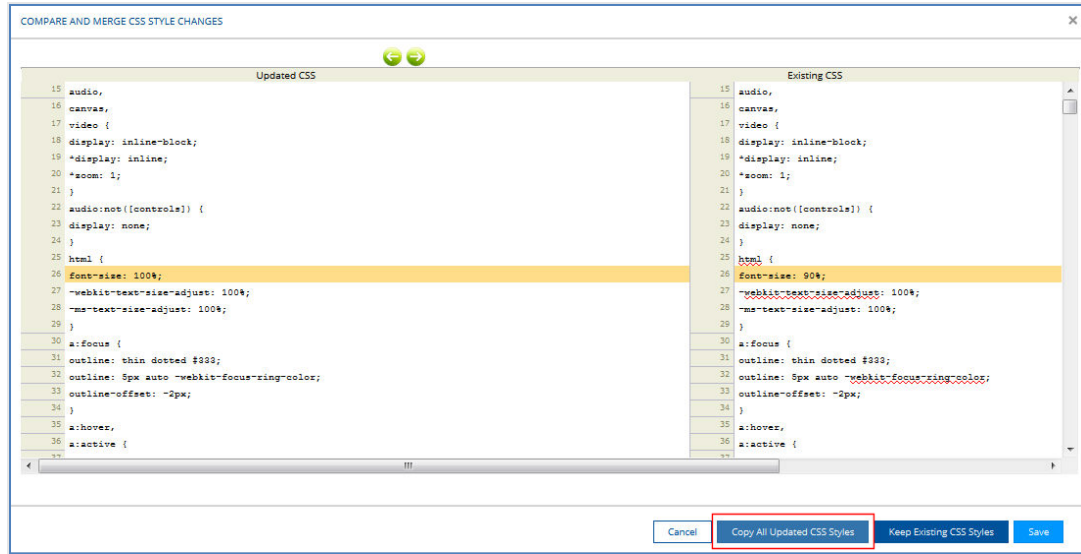

- a. Open the SmartStore with the changes (i.e., the one with the change alert icon  next to it).
- b. In the SmartStore Builder, open **5 Edit Page Elements & Styles**.
- c. Click the CSS editor icon  to open the style sheet.

- d. With your cursor in the CSS editor, press **CTRL+A** to select the entire contents of the window.
 - e. Press **CTRL+C** to copy the code to the clipboard.
 - f. Open Notepad or WordPad and press **CTRL+V** to paste the code into a new document.
 - g. Save the document.
3. Return to the StoreFront Management page.
 4. Click the change alert icon  to open the SmartStore that needs attention.

Note The change alert icon indicates that there is a difference between the existing CSS of a SmartStore storefront and the default CSS for SmartStore storefront (i.e., because a change was made to the CSS to support a new feature).

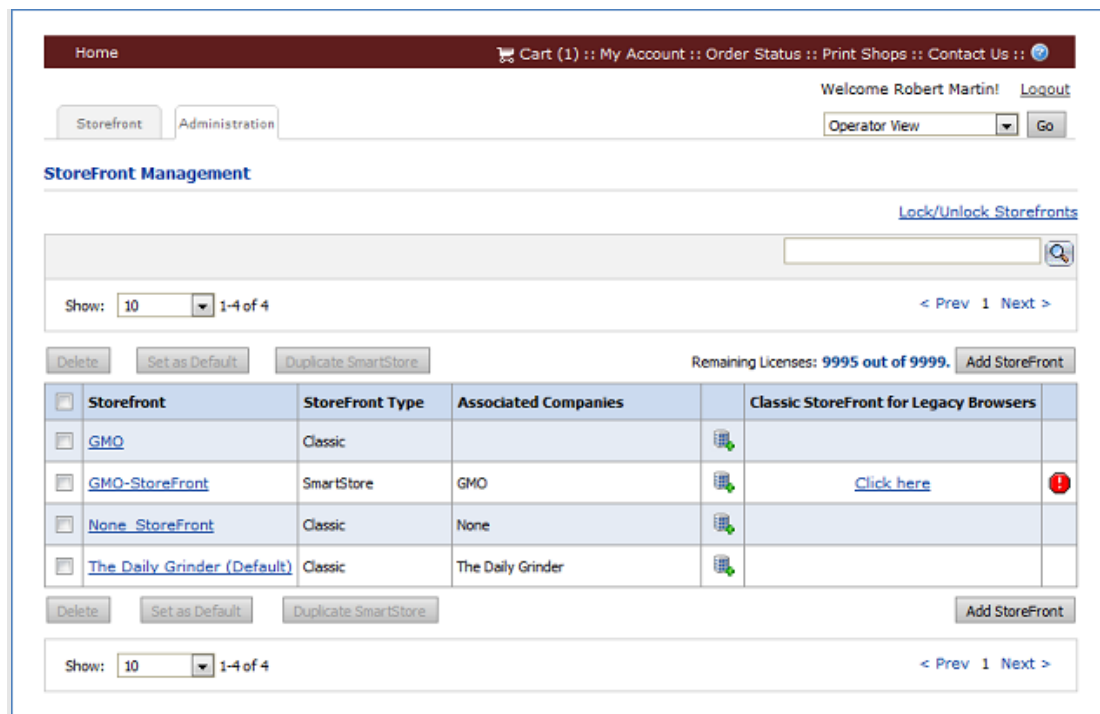

5. Click **Compare & Merge**.
6. Click **Copy All Updated CSS Styles**.

7. Click **Save**.
8. On the StoreFront Management page, open the SmartStore.
9. In the SmartStore Builder, open **5 Edit Page Elements & Styles**.
10. Click the CSS editor icon  to open the style sheet.
11. Reapply the previous customizations you had made.

Workflow 2 for SmartStores with Major Customizations

1. Go to **Administration > Storefront Customization**.

2. Make a backup copy of the SmartStore storefront so that you can recover if need be. To do

so:

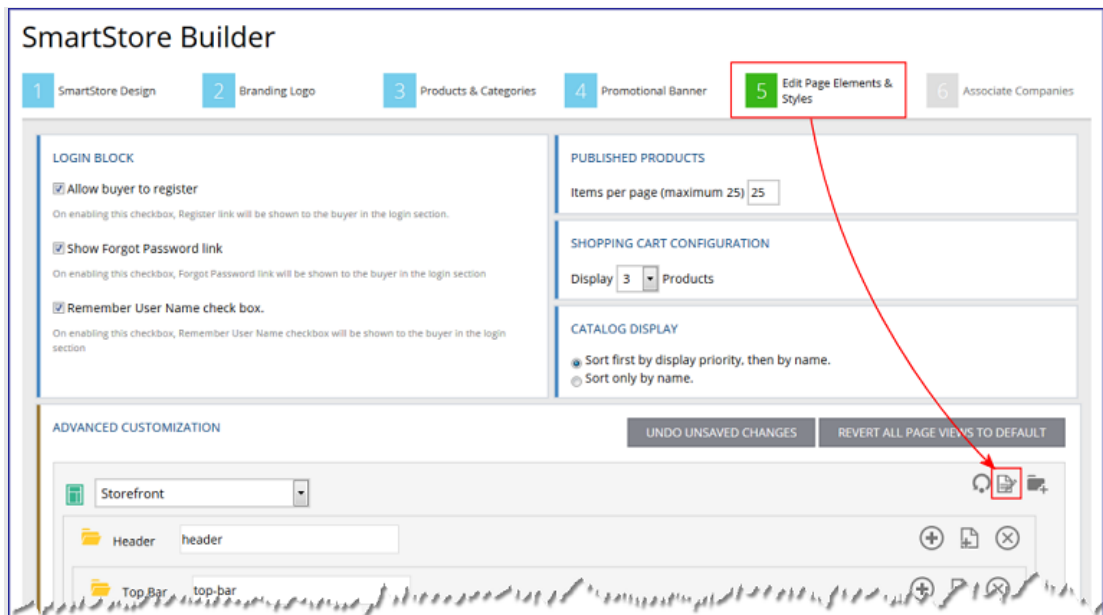

- a. Select the SmartStore with the changes (i.e., the one with the change alert icon  next to it).
- b. Click **Duplicate SmartStore**.
- c. Click **Copy CSS File from Base Theme**.
- d. Click **Duplicate Smartstore**.
- e. Open the duplicated storefront.
- f. In the SmartStore Builder, open **5 Edit Page Elements & Styles**.
- g. Click the CSS editor icon  to open the style sheet.

- h. With your cursor in the CSS editor, press **CTRL+A** to select the entire contents of the window.
 - i. Press **CTRL+C** to copy the code to the clipboard. (This will be the latest default CSS with the changes made for the new features and functionality).
 - j. Open Notepad or WordPad and press **CTRL+V** to paste the code into a new document.
 - k. Save the document (e.g., as “New_CSS”).
3. Return to MarketDirect StoreFront and on the StoreFront Management page open your customized SmartStore storefront.
 4. In the SmartStore Builder, open **5 Edit Page Elements & Styles**.
 5. Click the CSS editor icon  to open the style sheet.

6. Copy the CSS:
 - a. With your cursor in the CSS editor, press **CTRL+A** to select the entire contents of the window.
 - b. Press **CTRL+C** to copy the code to the clipboard.
 - c. Open Notepad or WordPad and press **CTRL+V** to paste the code into a new document.
 - d. Save the document (e.g., as “Old_CSS”).
7. Open both the “New_CSS” and “Old_CSS” documents in a merging application such as WinMerge (available as freeware from <http://winmerge.org/>).
8. Merge (or copy) only the new CSS code (i.e., in the “New_CSS” file) to the existing CSS code (i.e., in the “Old_CSS” file).
9. Saved the merged document (i.e., “Merged_CSS”).
10. Open the merged document, select all of the CSS code, and copy it to the clipboard.
11. Return to MarketDirect StoreFront and go to the StoreFront Management page.
12. Open the existing SmartStore storefront (the one you have previously customized).
13. In the SmartStore Builder, open **5 Edit Page Elements & Styles**.
14. Click the CSS editor icon  to open the style sheet.

15. With your cursor in the CSS editor, press **CTRL+V** to paste all of the merged code into the window.
16. Click **Save**.

Note To ensure that the Dynamic Web Forms feature introduced in MarketDirect StoreFront 8.4 will work properly, after completing the merge verify that the below class is present in the merged style sheet:

```
a[disabled="disabled"] {  
  pointer-events: none;  
  cursor: default!important;  
  color: #dddddd!important;  
  background-color: transparent!important;  
}
```
